- **Documented change management**
- **Quarterly DR testing and disaster recovery documentation reviews**

Clear North DISASTER RECOVERY FOR COMPELLENT STORAGE AREA NETWORKS

Who has the power to protect you in a disaster?

We do.

Disaster Recovery is more critical today than ever before, but affordable offsite disaster recovery has not been available for the SMB market until now. Clear North Disaster Recovery has the capabilities to get it done. Now you can focus on your business, not worry about business losses during a disaster at your production site.

What is Clear North Disaster Recovery?

This service features fully managed disaster recovery data center featuring Compellent Storage Center and Remote Data Instant Replay to get your mission critical volumes offsite in real time.

In the event of a disaster, our engineers would map all VM replicated volumes to the stand-by servers and bring them online with your VM Servers and Data back online. Network connectivity would be established through a pre-defined secure portal for your critical employees to access from anywhere they can get an Internet connection.

BENEFITS:

- **Critical data gets offsite in real time**
- **Up and running in 4 hours and up to a month in production**
- **Personnel productivity from any Internet connection**
- **Labor meets compliance standards**
- **Quarterly or Bi-Annual testing and to document any requirement changes for complete accuracy**
- **Our engineers ensures systems are maintained and volumes are being replicated**

Clear North DISASTER RECOVERY

FOR COMPELLENT STORAGE AREA NETWORKS

TECHNICAL SPECIFICATIONS:

- Compellent Storage Center configured for maximum redundancy – Dual path network with two controllers
- Redundant High Speed Internet connectivity
- All systems are on two separate UPS power grids with two separate backup generators
- Both VMWare VSphere and Microsoft Hyper-V Hosts are supported
- HP enterprise class servers with Dual Quad Core processors and 64GB of RAM
- Compellent Portable Volume provides the “seeding” of your volumes without pushing it over the data connection.
