- Additional features (such as devices alias' + user-defined attributes) are configurable to suit your needs + help streamline support processes

Night Owl PATCH & ASSET MANAGEMENT

Who has the expertise to manage your assets?

We do.

Up-to-date asset inventory information is fast and simple when using Night Owl patch & asset management. We help you realize greater value from your IT infrastructure with this industry-recognized business process that maximizes your software investment. Clear North Technologies' experts know when updates are needed, what software is on your systems, or when it's time to retire an asset. We continue to raise the bar so you can focus on your business, not your IT.

What is Night Owl Patch & Asset Management?

Today most security incidents are caused by flaws in software. Our patch management service is the ultimate solution to software vulnerabilities, with expert application of patches on a regular basis. Asset management provides you with all the accurate and essential system data required to successfully manage your business software. Included are software license tracking, hardware asset management, and help with compliance to regulatory and legal restrictions.

Asset inventory is collected at regular intervals with auto-discovery of current and changing assets. In addition, user defined data is supported so that clients can enter information such as warranty expiry, location, inventory tags, and notes.

BENEFITS:

- Reduce the risk of exposure
- Monthly fixed fee, not an hourly rate
- Access to experts
- A proven process to safely and reliably secure systems
- Improves system stability
- Staff is able to concentrate on business improvement
- No need to purchase a "patching server"
- Find out what software is on all your systems
- Peace of mind to focus on your business
- Upgrades to hardware can be done intelligently
