## WINDOWS SERVER 2008 R2 FEATURES:

- A stable foundation for your business
- Built-in virtualization
- Streamlined server management
- Enhanced security
- Support for the mobile workforce

## Dynamic Duo: Experience the Power of Windows 7 Teamed with Windows Server 2008 R2

### Leaner and *More Powerful* than Windows XP and Vista

Unlike its predecessors, Windows 7 is designed to run speed-sapping background services *only when you need them*. Not using a Bluetooth device? Then the Bluetooth service in Windows 7 stays off. Windows 7 is also less memory-hungry than Windows Vista—another under-the-hood tune-up that can boost overall performance.

Users will notice the productivity and performance enhancements immediately, while technical staff will be impressed by the manageability and deployment advances.

Windows 7 and Windows Server 2008 R2 work together to reduce the cost and complexity for businesses. This “Dynamic Duo” makes users productive anywhere with great performance and reliability, enhances security and control, and streamlines PC management.

### Delivering New Functionality, Powerful Improvements

Windows Server 2008 R2 offers you increased reliability and flexibility of your server infrastructure with the Web, *virtualization*, and security technologies. You can save time, reduce costs, and provide a platform for a dynamic and optimized datacenter. Powerful new tools allow you to have more control over your servers and streamline web, configuration, and management tasks. Advanced security and reliability enhancements protect your server environment to ensure you have a solid foundation to build your business on.

### Manage Your Business, Not Your Technology

Streamline implementation with *Windows 7 certified professionals* from Clear North Technologies. We can assist with the planning and deployment of Windows 7 and Windows Server 2008 R2, saving you valuable time and money. Our expert service includes:

- Technology briefings
- Proof of concept engagements
- Planning & design
- Pilot implementations
- Full migrations

We manage your technology so you can focus on business. Contact your Clear North sales representative today or call 952.828.9434.

### Performance & Reliability

- Better speed + access time and lower CPU usage
- Support for Green IT with 'balanced' power policy
- Outperforms Vista
- Reduce WAN link utilization with BranchCache

### Deployment

- Quick provisioning with Windows Deployment Services (WDS)
- Better driver support and easy to install + configure on a one-off install
- Improved migrations using the User State Migration Tool
- Run legacy applications with Windows Virtual PC and Windows XP Mode

### Security

- Encryption with BitLocker + BitLocker to Go
- Work securely anywhere with DirectAccess
- Enhanced User Account controls - less intrusive to users
- AAA security (Authentication Authorization Accounting)

### Management

- AppLocker application lock down
- Increased automation with PowerShell scripting language
- Quickly resolves issues with Windows Troubleshooting Platform
- Improved user and system file management with File Classification Infrastructure
